                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A Comment of Title (1990) A Comment of Title (1997) A Comment of Title (1990) A Comment of Title

     The present invention provide the protein and coding sequences for a nowel, hear of protein compile tempetor, destinant SELLIGIT. The sequence are useful, in the disposite prevention and fractions of diseases are useful. In the disposite percention and fractions of diseases are part and a sequence search on the sequence search of the seases, even bett failure, proteins, supplies a partitions of states, even bett failure, proteins, supplies and the sequence search of the sequence search of the sequence of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TDALCHIPIPVAKPLSLLQVEIPGIITSWVIGYSAINSALNPILYTLTTRPFKEXIHRF 120

The invention also provides geneite careaning procedures that catcaining a person's genome with respect to GFGs. The vectors are useful for the secondinant production of the GFGS, a present sequence is man coAR22 & protein-compled receptor (GFGS) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Seven transmembrane receptor polypeptides and polynucleotides, useful 
for treating menotodida, no psychiatric disorders, e.g. solizophremia, 
as well as for identifying compounds useful for treating schizophremia
                                                                           /label= Transmembrane_domain_(5TM)

epilopsy; and (f) infectious diseases e.g. oestebral anoxia and
and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel genes (AAI99548-AAI99604) and proteins (AAM99548-AAI9994), useful for preventing treating or maniforting manical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated digestive system associated polypeptide for treating,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 11; SEQ ID NO 96; 509pp + Sequence Listing; English.

The invention ralars to room of gone in Arisides Assiziation and gone from the content ralars to room of gone in Arisides Assiziation and groups of the Corp prevention and content and co parasitic infections.

The infections contain the patent did not form part of the printed specification, but was obtained a lactronic formst directly printed specification, but was obtained in a lactronic formst directly printed specification. Isolated polypeptide for treating, preventing and/ or prognosting disorders related to the misouloskeletal system including musouloskeletal cancers and also for testing and detection e.g., diagnosis. Claim 11; SEQ ID NO 2009; 781pp + Sequence Listing; English. :HS 08 - 8 - 700 - 500 Rosen Ch. Barash SC. Ruben (HUMA-) HUMAN GENOME SCI INC WPI; 2001-451937/48. N-PSDB; AAL35644.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
